

Chicken Starter Grower Mash

DESCRIPTION

CHF Organic Chick Starter Grower Mash is a broad spectrum ration specially formulated for chicks, pullets and meat birds. Formulated using certified organic grains and protein meals; the CHF Organic Chick Starter Grower Mash is free from all forms of medications that may be found in other starter feeds.

APPLICATION

LAYING HENS

Unlike other starter feeds, the uniquely diverse nature of this ration negates the need to change diets from a starter to a grower (pullet grower) part way through the growing cycle. This therefore avoids waste and the expense of a separate feed, as it can be fed to day old chicks through to point of lay hens (Approx. 18-20 weeks) or slaughter for broilers. (Approx. 10 - 12 weeks) It is important to ensure your chicks have free access to feed and water and are protected from any harsh environmental conditions. For very young birds it is necessary to keep them warm with a specialised heater lamp (or light), especially during the colder months. For laying pullets it is also advisable to begin blending the CHF Organic Chick Starter Grower Mash with your preferred CHF Layer ration at 16 weeks of age. This will provide the extra calcium and nutrients to assist with egg production.

MEAT BIRDS

The CHF Organic Chick Starter Grower Mash is equally adaptable when feeding meat birds, once again avoiding the need to swap to a grower ration during the growth cycle; allowing the same feed to be fed until slaughter. (Approx. 12 weeks).

ANALYSIS

Min. Crude Protein	18.0%
Max. Crude Fibre	7.0%
Max. Salt (NaCl)	0.3%
Copper	10.5 mg/kg
Selenium	0.26 mg/kg
Min. Calcium (Ca)	1.0%
Max. Calcium (Ca)	1.8%
Min. Phosphorus (P)	0.4%
Max. Phosphorus (P)	1.0%
